DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on December 18, 2008 has been entered.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Joyce Morlin on December 23, 2008.

The application has been amended as follows:

1. In claim 32, line 3, after "suffering from" ~~delete~~ "vascular disease" and insert "a brain injury", and in line 8 before "cells", ~~delete~~ "vascular" and insert "brain".
2. In claim 33, line 2, after "nanoparticles to" insert "the".

EXAMINER'S STATEMENT OF REASONS FOR ALLOWANCE

Applicant's amendments to the specification and to the Figure 7 drawing submitted December 12, 2008 has been fully considered. In light of the Applicant's amendments and Examiner's amendments, claims 27, 29, 32 and 33 are allowed and renumbered to claims 1-4.

The following is an examiner's statement of reasons for allowance: The claims 27, 29, 32 and 33 are drawn to a method for enhancing the survivability of living brain cells *in vivo* and *in vitro* by administering ultra fine engineered nanoparticles of cerium oxide. There is no prior art disclosing administering cerium oxide of the size approximately 2 nm to approximately 10 nm to brain cells. The closest art is Kropf et al. in view of Shui et al. Kropf et al. teaches a skin composition blocking the penetration of UV radiation comprising cerium oxide with a mean diameter of less than 10 nm, preferably between 5 and 50 nm (see column 8, lines 29-32 and 34-36). Kropf et al.

does not teach a method of enhancing the longevity of cultured living cells, but Shui et al. teaches that the morphological observation of cell death and phagocytosis induced by ultraviolet irradiation in cultured human lens epithelial cells. The cell viability was stained and found that UV irradiation causes both apoptosis and necrosis of the cell line (see title, abstract, lines 10-18). Therefore, it would be obvious to add a known UV protectant to help prevent UV from affecting the cell. Since the present claims require the cells to be brain cells, Krof et al. nor Shui et al. suggest the use of cerium oxide in brain cells *in vivo* or *in vitro*.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kendra D. Carter whose telephone number is (571) 272-9034. The examiner can normally be reached on 7:30 am - 4:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sreeni Padmanabhan can be reached on (571) 272-0629. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
